

MICHAEL EDDLESTON

Milton Keynes, MK22XE | 07969292664 | michael.eddleston@icloud.com | github.com/Micmada | michaeleddleston.com

Software Engineering Graduate with 14 months of experience at ARM and strong full-stack development skills. Experienced in building production-ready applications with React/React Native, Python, and modern backend technologies. Proven track record delivering automated tools at scale and developing complex mobile/web applications with modern frameworks and cloud infrastructure.

EDUCATION

BSc Software Engineering (Honours), 2:1 | University of Winchester | May 2025

A-Levels: Computer Science (C), Mathematics (C), Physics (C) | The Hazeley Academy | June 2021

WORK EXPERIENCE

Software Engineering Intern | ARM, Cambridge | June 2023 - March 2025

Developed and automated tools for generating the ARM Architecture Reference Manual, contributing to cutting-edge software platforms that met industry standards for efficiency, performance, and test coverage. Participated in decision-making for projects of various sizes, focusing on modern technologies and software development best practices.

- **Architected Python automation system to replace legacy documentation pipeline**, reducing processing time from 1 week to under 24 hours for 20,000+ page technical specifications; delivered 2x efficiency improvement in production environment
- **Debugged and resolved critical production issues** identified in senior engineers' code, maintaining system stability for enterprise-scale documentation generation workflows
- Collaborated in Agile environment using Gerrit for code reviews and Jenkins for CI/CD, **contributing to modernisation of legacy systems** processing machine-readable architecture specifications
- Gained hands-on experience developing **large-scale document automation systems** handling complex technical specifications for industry-standard ARM architecture documentation

Co-Founder & Lead Developer | Re-site, Milton Keynes | March 2026 - Present

Co-founded a bespoke React web agency building custom sites for clients.

- Architected Pantheon, a proprietary backend management platform with schema-driven module architecture and per-client CNAME subdomain deployment
- Designed modular platform architecture with independently deployable routes and schema-driven client configuration
- Currently delivering first client project: full-stack React/PostgreSQL portfolio and e-commerce site

Customer Service Team Member | Ocado, Milton Keynes | July 2025 - Present

- Deliver groceries on time with excellent customer service. Maintain high efficiency while adhering to health and safety standards.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Java, Go, C/C++, C#, HTML/CSS, SQL

Frontend/Mobile: React, React Native, Tailwind CSS, React Grid Layout, Recharts

Backend: Node.js, Express, Flask, Django, Gin, RESTful APIs, JWT Authentication

Databases/ORM: PostgreSQL, MongoDB, SQLite, MySQL, Prisma ORM, GORM

ML/Data Science: XGBoost, PyTorch, FastF1, Streamlit, NumPy, Pandas, Apache Spark

Tools/DevOps: Git, GitHub, Jenkins, Gerrit, AWS, Azure, Zustand (State Management)

Professional: Agile Methodologies, Code Review, CI/CD, Problem Solving, Team Collaboration, Technical Communication

PROJECTS

FitTrack UK - Full-Stack Mobile Fitness App | React Native, TypeScript, Node.js, PostgreSQL, Prisma - Comprehensive fitness tracking app combining nutrition and workout logging. Features barcode scanning, OpenFoodFacts API integration, macro/micronutrient tracking with UK RDA requirements, 43+ exercise library, set/rep logging with weight tracking, and performance history. Built with JWT authentication, Zustand state management, and RESTful API backend.

F1 Race Strategy Predictor (Final Year Project) | Python, XGBoost, PyTorch, Streamlit - GPU-accelerated ML system using XGBoost and Monte Carlo simulation to analyse F1 race strategies. Features track-specific models trained on FastF1 telemetry data, legal strategy generation respecting F1 regulations, tyre degradation prediction, and interactive Streamlit dashboard for strategy comparison and visualisation.

Portfolio Website | React, TypeScript, Tailwind CSS, AWS Amplify - Modern portfolio with real-time GitHub API integration for live project data, commits, and README content. Features interactive filtering by technology stack, responsive design, smooth animations, and continuous deployment on AWS Amplify.

React Data Dashboard | React, TypeScript, React Grid Layout, Recharts - Customizable business intelligence dashboard with drag-and-drop widgets, dynamic data tables with selectable columns, and chart visualisations. Responsive grid system adapts to all screen sizes with real-time widget management.

MERN Task Manager | MongoDB, Express, React, Node.js - Full-stack task management application with complete CRUD operations, priority levels, due dates, task completion tracking, and RESTful API. Features a colour-coded priority system and responsive UI with real-time updates.

Go URL Shortener | Go, Gin, GORM, JWT, SQLite - High-performance URL shortening service with secure user authentication using JWT tokens, bcrypt password hashing, and automatic database migrations via GORM. Modular architecture with separated routing and middleware layers.

RELEVANT COURSEWORK

Advanced Software Development, Distributed Systems, Parallel Programming, Cloud Development, Object-Oriented Programming, Functional Programming, Software Testing, Discrete Mathematics & Algorithms, Secure Systems Architecture, Database Analysis & Design, Cyber Security & Networks

ADDITIONAL INFORMATION

PC Building: Built and maintained 6+ custom PCs, providing technical consultation for hardware optimisation

Rugby: 12 years playing experience, trained with Northampton Saints Development Player Programme
